SUMMARY

Aspiring Data Scientist and Data Analyst with hands-on experience building machine learning and deep learning solutions, backed by a strong foundation in programming and analytical tooling. Proven ability to turn raw data into meaningful insight, from transfer learning models to NLP-driven sentiment analysis to interactive BI dashboards. Looking to apply this blend of technical depth and analytical thinking in a Data Analyst or Data Scientist role.

TECHNICAL SKILLS

Languages: Python

ML / Deep Learning: Scikit-learn, TensorFlow, Keras, Neural Networks (Perceptron, MLP)

NLP: NLTK, TextBlob, Tokenization, Sentiment Analysis

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, DAX

Databases & Tools: MySQL, Microsoft Excel, Git, GitHub, Google Colab (GPU)

Exploring: Generative AI, LLMs (Gemma), Prompt Engineering, AWS / GCP

EXPERIENCE

Data Science Intern

Ongoing

Pratinik Infotech

- Selected and implemented a Plant Disease Detection project using transfer learning on the New Plant Diseases Dataset (~87,000 images across 38 classes), as part of a structured, multi-track Data Science internship program.
- Built and trained a convolutional neural network pipeline in Google Colab (GPU), covering data preprocessing, augmentation, model fine-tuning, and evaluation, achieving 79% validation accuracy.
- Collaborated on additional internship project tracks covering applied machine learning and data analysis workflows.

PROJECTS

Sentiment Analysis System

2025 - 2026

Python, NLTK, VADER, TextBlob

- Built a multi-model NLP pipeline using VADER and TextBlob, performing tokenization, stopword removal, and polarity scoring on real-world text corpora.
- Benchmarked rule-based models against each other, analyzing precision trade-offs across positive, negative, and neutral sentiment classes.
- Visualized sentiment distributions and model deltas using Matplotlib and Seaborn to surface actionable, data-backed insights.

Football Match Outcome Prediction

2025

Python, Scikit-learn, Matplotlib, NumPy

- Built a binary classification project comparing Perceptron and SVM algorithms to predict football match outcomes using possession percentage and shots-on-target as features.
- Selected SVM as the better-performing model for handling overlapping data patterns, based on comparative evaluation of decision boundaries.
- Practiced core ML workflow: data preprocessing, feature scaling, model training with Scikit-learn, and visualization of results with Matplotlib.

Interactive Solar System Orrery

2024

Three.js, Node.js, Express.js, MySQL, HTML5, CSS3

- Built a real-time interactive 3D visualization of the solar system (Sun to Pluto, moons, and asteroid belt) using Three.js, OrbitControls, and OBJLoader, featuring realistic planetary rotation, revolution, and orbital paths.
- Implemented planet search, dynamic info panels, zoom-to-planet navigation, and orbit/label toggle controls to enhance user interactivity.
- Developed a secure login/registration backend using Node.js, Express.js, and MySQL with bcrypt.js password hashing; collaborated in a 4-member team to design and deploy the project.

CERTIFICATIONS & TRAINING

Gen AI & Data Science Bootcamp 3.0 (Ongoing)

2025 - Present

Codebasics

- Topics: Generative AI, LLMs, Prompt Engineering, Advanced Python for Data Science, SQL for Analytics, End-to-End ML Pipelines.

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

- Documentation Head, Hackronyx 2025 — National-level hackathon; managed event documentation and coordination across teams.
- Coordinator, Envision 2026 — Data Science-based hackathon; supported end-to-end planning and execution.
